THE AMERICAN CANON VERIFIED BY THE RECORDS OF A SOLAR ECLIPSE, R.C. 1856.

John Hiller, Boston; May 19, 1856.

In the course of a recent study I have been able to verify the American Canon, which I have found to be the most accurate of all the American Canons. This Canon, which I have been working on for about four years, contains a complete list of all the eclipses of the Sun in the United States from the time of the first solar eclipse on March 21, 1856, to the last eclipse of the year 1936, and it is my conviction that it will be of great value to those who wish to study the subject.

The Canon contains an accurate table of the eclipses of the Sun in the United States, and it is my belief that this table will be of great value to those who wish to study the subject. I have found that the eclipses of the Sun in the United States are not always recorded in the proper place, and that the Canon contains a complete list of all the eclipses of the Sun in the United States from the time of the first solar eclipse on March 21, 1856, to the last eclipse of the year 1936, and it is my conviction that it will be of great value to those who wish to study the subject.

The Athenæum

The Athenæum was a British literary and cultural weekly magazine published from 1828 to 1951. It contained articles, reviews, and essays on a wide range of topics, including literature, art, politics, and society. The text in the image appears to be an excerpt from a historical or political article, discussing events and figures from the past. The specific content is not clear without further context, but it likely involves analysis or commentary on historical events or figures of note.

Given the nature of the text, it would be appropriate to classify it as historical, political, or cultural analysis. The style and formatting suggest it is an excerpt from a formal, academic, or literary work, which aligns with the style of The Athenæum. This type of content is typically found in historical journals, academic papers, or literary reviews, focusing on specific events or themes.
